- Index Color Separations
- Sepiatone Old Photo Separations
- Spot Color Separations

## FEATURE

FastFilms™ separates most jobs in less than five minutes AND you get a very accurate monitor preview of what the job will print like. Now you can quit sending out for high-end seps - do them in house just like the pros. Output to an inkjet with Postscript, your laser printer on vellum or laser acetate, or an imagesetter. You can even do square dot index separations with FastFilms™.

This unique automated software is based on Scott Freseners's years of teaching the processes and his intimate knowledge of screen printing and using Photoshop for high-end separations. It is like having Scott sitting at your computer doing the seps for you! When you invest in software like FastFilms™ you need to buy from someone you know and trust. Besides being a highly respected industry leader, Scott is also a member of the Adobe Developers Network and was on the beta test team for Photoshop 6.0.

We realize there are other programs on the market who claim to be similar to FastFilms™ but sell for less money. Many of them brag that they are "the same" as FastFilms™. The truth is that Scott Fresener did not write their programs. With FastFilms™ there are no confusing Adjustment Channels or double-talk. FastFilms™ gets it extremely close right out to the box. Also, some competitors are offering lifetime upgrades and lifetime support as a sales tool. The problem is that their companies are only a few years old and in many cases they are home based operators. FastFilms™ is offered by the highly respected U.S. Screen Printing Institute - celebrating 25 years of industry leadership. U.S. Screen will be around when you need support and upgrades. Trust your instincts and go with the number one program on the market. Keep in mind that a different software program is not a "deal" for less money if the program doesn't work!
